1. Stress Analysis
2. Steady state seepage Analysis
3. Transient seepage Analysis
4. Slope Stability Analysis
5. Stress-Seepage **Fully Coupled/Semi-Coupled** Analysis
6. Dynamic Analysis – Seismic

We may also require,

7. Heat of Hydration Analysis
8. Crack Propagation Analysis
9. Thermal Stress Analysis
10. Dam Breach Analysis
11. Particle Flow – Soil Erosion

Conclusion

In conclusion,

- A preliminary analysis with Elastic/Mohr-Coulomb should be carried out and check whether the expected behavior is achieved or not.
- For detailed analysis as per requirements, we can proceed with 3D modeling as well as Time History Analysis.
- With a lot of available online content and advanced computing hardware, 3D modeling can be carried out **with no difficulties!!**

MIDAS products can perform most of the analyses mentioned in the presentation.
